

# FAMILY RESEARCH STUDY

## Looking for families of teens and adults with ASD

We are researchers who are studying the health services that teens and adults with autism spectrum disorder use. We are very interested in hearing from families across Ontario.

- In order to better understand families' experiences, we are asking parents to complete some surveys and briefly follow up with us every other month about health care service use for 1 year.
- You can participate in this project online, over the phone or by completing paper pencil questionnaires.
- **Cash honorarium will be provided**
