See your brain in action

Volunteer at SickKids!

Using neuroimaging to study brain function in autism

We are looking for young adults with an autism spectrum disorder (**ASD**) to participate in research studies investigating brain function during number estimation tasks. Volunteers will participate in neuromagnetic and MRI testing.

We need volunteers who are 21 to 35 years old and have a diagnosis of an autism spectrum disorder

We will obtain structural brain images and then measure your magnetic brainwaves while you are working on tasks. This is completely non-invasive and does not involve any form of radiation.

Participants will be reimbursed for travel or parking, and will receive a small gift and pictures of their brain!

For more information, please contact Dr. Margot J. Taylor's Functional Neuroimaging Lab at 416-813-7654 ext. 4299 or brainstudy@sickkids.ca.
